

Along came the Maker Movement

According to Techopedia, the Maker Movement is a trend in which individuals or groups of individuals create and market products that are recreated and assembled using unused, discarded or broken electronic, plastic, silicon or virtually any raw material and/or product from a computer-related device.

From 3D Printers to circuit boards and printing, I have seen the Maker Movement explode into not only a new way of learning and thinking, but also viable businesses to launch.

*There are many television shows that are authentically taking the lead in this movement such as **Shark Tank, Ellen's Design Challenge, FORGED IN FIRE, & Project Runway.***

*This is truly second order change movement that provides students the opportunity to apply their content knowledge, practical knowledge and creativity to **make a difference in the world** we live in!*
